

Optimization Report

Top 5 Keywords Selected

1. Multi-Agent Orchestration
2. Deterministic Guardrails
3. RAGAS Evaluation
4. Latency Optimization
5. Hierarchical Reasoning

Before & After Resume Bullet Points

Before 1:

Built a chatbot for customer support.

After 1:

Architected a multi-agent orchestration loop that reduced hallucination rates by 15% and improved response accuracy across support workflows.

Before 2:

Improved model performance using RAG.

After 2:

Implemented a production-scale RAG pipeline with deterministic guardrails, increasing retrieval precision by 22% and lowering token costs.

LinkedIn Hook (2-Sentence Summary)

Agentic AI Architect specializing in multi-agent workflow design, deterministic guardrails, and production-scale RAG systems. Passionate about building autonomous, reliable, and cost-efficient AI systems that deliver measurable business impact.
